

Proactive Video Monitoring Integration featuring Camect

Netwatch: A Leader in Security Monitoring

About Netwatch

Our company was founded in 2003, after an attack on a security guard brought the need for a better way to protect people and property into sharper focus. The lessons learned from that crime have been woven into the company's mission, values, and culture from the start. The team stayed true to its roots as the company grew, expanded its presence in the U.S. in 2012, and merged into Netwatch Group in 2018.

We purpose-built and launched our proactive video monitoring solution to address the need for video monitoring to prevent crimes from happening rather than just reacting and responding to incidents. This remains our primary goal as we continue to develop and adopt new technologies, while leveraging the strengths of our highly trained, experienced, and dedicated monitoring staff to offer the industry's most valuable and reliable monitoring service at an affordable price.

About Camect

Fed up with too many security alerts and not enough security intelligence, two google computer engineers left their career jobs in 2018 to create a solution. They wanted an edge based, open ended device, compatible with nearly every camera system. One that was smart enough to transit only the alerts they needed to see, and capable of learning what to ignore. And that is what they created. Within a few years their flagship device Camect Smart Camera Hub 24MP has become one of the most raved about, indemand solutions to the security industry. Camect continues to lead the way with award winning analytics and a false alert rate that is under 1%. Camect is sold world wide and proud to partner with Netwatch.

Proactive Video Monitoring and Camect Solution Overview

Netwatch Proactive Video Monitoring is now fully integrated with Camect's Hub. Camect Hubs are not only an edge device, but these hubs provide best in class analytics, a NVR and a gateway to Netwatch Proactive Video Monitoring. Camect Hubs work with most any ONVIF/RTSP cameras, allowing for easy integration and no need to rip and replace existing cameras. Camect and Netwatch Proactive Video Monitoring provide users with:

- ✓ Ability to add proactive video monitoring services to existing security services
- ✓ Identify intrusion incidents and provide live-audio intervention to prevent crime in real-time
- ✓ Detect loitering and issue live-audio warnings in order to mitigate and safely de-escalate incidents before a crime occurs

What is Proactive Video Monitoring?

Proactive video monitoring is a service that leverages on-site video surveillance systems and hubs, like Camect, comprehensive machine learning analytics, and highly trained intervention specialists to monitor sites and follow customer-determined protocols when a threat is detected. This monitoring-to-protect approach sets us apart in the market and enables us to prevent most incidents from occurring.

PVM is proactive where most other solutions are passive or reactive. With Netwatch, our expertly trained Intervention Specialists in redundant state-of-the-art, UL-listed monitoring centers, take action before a threat becomes an incident. Our intelligent detection solution delivers 24/7/365 protection, reducing the need to hire security guards, while improving the ability to monitor and respond to potential threats. PVM provides an effective and cost-efficient way to protect your people, property, and assets.

Camect's Hub works with most ONVIF/RTSP Cameras. This solution is offered in North America and EMEA at this time.

Benefits of Smart, Early Detection and Proactive Video Monitoring

Benefits of Netwatch and Camect

- ✓ Smarter, more accurate analytics reduces false alarms
- ✓ Up to 80% savings over guard expenditure
- ✓ Increased awareness and attention compared to security guards alone
- ✓ Reduced risk of compromised services
- ✓ Proactive rather than reactive security
- ✓ Over 100,000 crimes deterred to date

How PVM Works:

Monitor | Intervene | Report

-  1. Intelligent software **DETECTS** a threat
-  2. An expert **ASSESES** and **VERIFIES** the threat
-  3. A security specialist manually **INTERVENES** based on the situation and customer protocol – this is live audio talk down; not a pre-recorded message
-  4. Per pre-determined customer-protocols, the appropriate party **RESPONDS** to the incident
-  5. Incident **REPORTS** are issued within 24 hours

Netwatch North America's Proactive Video Monitoring expertise, business focus, and data-driven technologies provide the highest levels of safety and security, risk mitigation, and scalability to help improve and future-proof business operations.

With over 100,000 crimes prevented to date, Netwatch's comprehensive and scalable security solutions set the standard in crime control and prevention.

Netwatch North America's Proactive Video Monitoring expertise, business focus, and data-driven technologies provide the highest levels of safety and security, risk mitigation, and scalability to help improve and future-proof business operations.
